

GRAVITY FILLING MACHINE

DESCRIPTION

This Filling Machine is gravity type filling machine which is suitable for filling thin fluid.

The machine is made by in-line structure , filling head quantity can be custom-made according to different production capacity such as 6/8/10/12/16 /20 heads.

All filling heads can be diving from the bottom of bottle to start filling.

*Suitable material: Wine, beverage, vinegar, daily chemical and something that are low viscous, especially for the foamy liquid.

*This Vertical filler is a high-tech filling equipment integrating on the PLC microcomputer programmable control, and photo electricity instruction pneumatic action.

*The machine suits for the filling of different sizes of vessel may change the filling sizes within a few minutes. Short filling circle, high production capacity.

*User may choose the filling volume and decide the filling heads per own production capacity.

SPECIFICATION

1.	Operational mode	automatic
2.	Container type	bottle
3.	Product applications	for liquids
4.	Domain	for the food industry, for the pharmaceutical industry, for the cosmetics industry, for the chemical industry
5.	Type	gravity, in-line
6.	Number of heads	multi-head
7.	Other characteristics	PLC-controlled
8.	Throughput	Min.: 800 p/h Max.: 7,200 p/h
